

### Dedicated bandwidth

TamarNet Plus offers a dedicated leased line equivalent service for companies that require significant bandwidth for consistently high availability and guaranteed performance. Your bandwidth is not shared with other companies so you have fast, reliable internet access whenever it is needed.

### Global, static IP addresses

By default, each tenant subscribing to TamarNet Plus is allocated five global IP addresses that can be used for hosting Internet-accessible services such as websites, email servers and for virtual private network (VPN) termination. If required, more addresses can be made available subject to the completion of the relevant RIPE paperwork.

Tenants can also access services provided by our ISP partner for domain and email management including DNS, POP3 and outbound SMTP servers.

### Preferential pricing structure

We have negotiated rates for Tamar Science Park tenants that compare favourably with those offered by external service providers. Rates are charged according to the required bandwidth in increments of 1Mbps on a monthly basis.

### Resilient network

Our network infrastructure is designed for resilience. All core equipment is stored in environmentally monitored conditions and protected by uninterruptible power supply (UPS) systems to ensure continued reliable service. In addition, Tamar Science Park deploys diversely routed dual fibre connections to separate external points of presence linking the Park to the ISP.

### Security

Tenants using TamarNet Plus usually provide and manage their own firewall. However, Tamar Science Park can offer this service at an additional charge if required.

- Dedicated bandwidth
- High availability
- Global, static IP addresses for Internet hosting
- Preferential rates
- Resilient network infrastructure
- On-site network infrastructure management team

### Is TamarNet Plus right for your company?

TamarNet Plus is suitable for medium-sized companies or businesses that host Internet-accessible services on-site such as websites, high volume mail servers or other bandwidth-intensive and time-sensitive systems and applications.

### Advice and support

Members of our dedicated, on-site ICT team are always happy to discuss your specific requirements, offer advice and make recommendations.

Backed by our technology partners and vendors, we also manage, monitor and maintain our own network infrastructure. This means that if any issues do arise we can resolve them swiftly and you will be kept fully in the picture.

### Technical information

Minimum bandwidth	1Mbps symmetric - increased in increments of 1Mbps
Minimum subscription period	3 months with a 2 month notice period
Contention ratio	Not applicable - dedicated bandwidth is reserved for each subscriber
Presentation	Ethernet
Static, global and IP addressing	5 useable IP addresses routed to connection
Download usage cap	None
